circumferri posset, omissis descriptionibus, solas appellationes addendas curavi. Mole quidem liber exiguis; rerum tamen nulli secundus; utpote qui numerosissimam plantarum seriem, ri prætermissa, ob oculos ponat. Eo enim non tantum sponte suis, sed in Germania obuias; sed peregrinas quoque in Hispania, Gallia, Italia, Græcia, Palæstina, India, America, nouoque orbe &c. prouenientes, exhibere studui. Cum in propagandis stirpibus non raro natura luxuriat, ut à parente aliam producere sobolem videatur: omnem illam specierum varietatem ad hoc opus conferre sum conatus: ita ut ne quidem hortulanorum cultum, & conferendi solertiam neglexerim, quibus sæpe aliam herbas induere faciem, ac speciosius adolescere videmus. Hosce conatus & labores meos, si philiatris ac medicinæ candidatis placere intellexero: faciam ut breui alter de stirpibus commentarius sequatur; in quo ea, quæ priore desiderantur tomo, omnia quam accuratissime describentur.

Tibi autem, Vir Amplissime, hoc herbarum promptuarium dedicare, subque nomine tuo in lucem prodire volui: ut meum erga te studium, & propensi animi testificationem, quo possem modo, declararem: proque magnis in me tuis officiis aliquod saltem gratitudinis argumentum reponere. Hac igitur admiranda & planè diuina stirpium varietate, animum rebus grauioribus defessum, reficere ac demulcere poteris; si quando à ferijs negotijs respirare, & ab aulicis functionibus aliquantisper conuiescere licebit. Nam & olim reges heroasque fortissimos, hanc medicinæ partem diligenter tractasse legimus: & nostro seculo viri principes nihil antiquius, nihil in vobis magis habent, quam scire potestates herbarum, vsumque medendi.

Id munusculum leuidentè, mei in te amoris ac observantiæ pignus, æquo ac-

Studiosiss,

Nicolaus Bassæus,
Typographus.

AD LECTOREM.

ENdamus exiguo varias in codice formas
 Herbarum, ut potuit fingere docta manus,
 Quas THEODORVS IACOBVS de monte Tabernæ
 Undique collegit sedulitate sua:
 Inque suos hortos multis plantauit ab annis,
 Et cultas gelida sæpe rigauit aqua.
 Denique multiplices vires expertus earum
 Toto quo vixit tempore Pæonides,
 Ordine distinxit nuper bonus arbiter herbas
 In certas classes dexteritate parj.
 Omnes hos voluit Medicis prodesse labores
 ΕΝΤΥΠΩ dans illis conspicienda palàm.
 Hinc adeo primum nunc edidit ante volumen
 Cui virtus harum, nomen, & vsus inest.
 Et nisi fatali superatus morte fuisset,
 Omne quod est reliquum continuasset opus.
 Diuersas igitur si quis cognoscere stirpes,
 Aut medicas olim vult adhibere manus:
 Hunc emat ille librum, qui plures continet herbas,
 Quàm plerique ferè, quos vagus orbis habet.
 Atque fruatur ita pictis in imagine plantis,
 Donec opus cœptum compleat ΕΞΧΕΙΡΟΣ.

Conradus Lautenbach
 Mutislariensis.

Zeugnuß des Hochgelehrten Herrn Hiero-
nymi Tragi/von Jacobo Theodoro Tabernemontano/rc.
